The concept is to inject a high-velocity fluid in order to increase kinetic energy and reduce the pressure of the fluid to draw it by suction into the flow stream. Show simple calculations to prove the concept.

Solution: Given a simple jet pump

operation. Assume that sections (1) and (2) That is $\rho_1 V_1 A_1 + \rho_j V_j A_j = \rho_2 V_2 A_2$ But in general, we should use the same fluid to inject into ...

Mechanics (Greek: μηχανική) is the area of physics concerned with the motions of physical objects. Forces applied to objects result in displacements, or changes of an object's position relative to its environment. This branch of physics has its origins in Ancient Greece with the writings of

In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases. It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and

The Navier-Stokes equations are the basic governing equations for a viscous, heat conducting fluid. It is a vector equation obtained by applying Newton's Law of Motion to a fluid element and is also called the momentum equation. It is supplemented by the mass conservation equation, also called continuity equation and the energy equation. Usually, the term Navier-Stokes equations

Thermodynamics, An Engineering Approach, eighth edition, covers the basic principles of thermodynamics while presenting a wealth of real-world engineering examples so students get a feel for how thermodynamics is applied in engineering practice. This text helps students develop an intuitive understanding by emphasizing the physics and physical arguments. Cengel and Boles explore the various ...
