It makes the most sense to have battery electric locomotives where the diesel exhaust is a problem like in cities, tunnels, or other high density locations, such as ports, rail yards and so on. Weight may not be as much of a significant factor but the energy per unit volume of diesel is an order of magnitude greater than Li-ion cells. A typical Li-ion cell has an energy density of about 500 W ...

It requires 'electric power'. Aside from that, the information you've posted is insufficient to provide any better answer. Duty cycle suggests how long the machine will operate at any given load state prior to overheating. Is is therefore irrelevant to power requirements, save for the fact that incoming power must be high enough to produce output of the desired level. While welding OUTPUT is ...
